CODY STOERCK

(714) 504-4720 | Irvine, CA | cstoerck@gmail.com | LinkedIn | GitHub | Portfolio

Data Analyst at Dunlop Sports Americas building production dashboards and SQL/Python pipelines that surface operational and financial insights for business teams. Delivered analytics initiatives generating over $1M in annual cost savings and 1,000+ labor hours saved. Grounded in dimensional modeling and analytics engineering principles through hands-on dbt and Snowflake projects. Pursuing an M.S. in Analytics at Georgia Tech with AWS and Power BI certifications.

Skills

Languages: SQL, Python (pandas, matplotlib), DAX
Tools: Power BI (Semantic Modeling, Import/DirectQuery, Gateway Administration), Snowflake, dbt, SQL Server, AWS, Airflow, Airbyte, Docker, Git, Tableau, Excel
Analytics & Engineering: Dimensional Modeling, ELT/ETL Development, Analytics Engineering, Dashboard Development, Workflow Automation, ERP Data Analysis

Professional Experience

DATA ANALYST, ANALYTICS ENGINEERING — Dunlop Sports Americas Sep 2025 – Present

- Own the SQL-to-Power BI architecture behind 30+ production dashboards (extraction, Import/DirectQuery semantic modeling, DAX), serving 50+ users across 8 departments.
- Designed a Python + Power BI statistical process-control tool (control charts, histograms, box-and-whisker) on a 120M-row production ledger, expanding a one-week Lean Six Sigma pilot in Shipping into a framework used by 5 departments (stockroom, personalization, assembly, shipping, quality control) and cutting average processing time by 20%.
- Traced the root cause of elite-tier orders missing a 2-day SLA using statistical process control, directly informing a company-wide initiative to bring all lead times (5 days regular, 3 days expedited) to the 2-day benchmark.
- Present monthly analytics results to the President/COO and work directly with the CFO to analyze freight cost drivers and model projected savings from packaging changes.
- Built an API pipeline to auto-populate delivery-date data, replacing manual entry, improving report accuracy, and reclaiming 250 labor hours annually.

PRICING & BID SPECIALIST, DATA ANALYSIS — TTM Technologies May 2024 – Sep 2025

- Built a quote-to-book performance analysis in Excel, surfacing accounts with as many as 250 quotes and zero bookings and calculating win rates and revenue contribution to help management redirect sales effort toward higher-converting accounts.
- Ran each bid from drawing review to final price: reviewed customer fabrication drawings and technical specs, modeled production yield and cost, and priced quotes to win the business.

BUSINESS INTELLIGENCE ANALYST — Freelance Jul 2022 – May 2024

- Built a market and lead-intelligence Power BI platform for a real-estate client, replacing a set of separate reports with a single model that tracked listing prices, KPIs, and market conditions without manual calculation.
- Built a Power BI dashboard for a food-service client analyzing historical order data and weekly/monthly demand trends, helping the owner calibrate food-prep quantities and cut food waste by 25%.

Projects

ONYX AUTO ANALYTICS ENGINEERING PLATFORM — Project Write-Up | GitHub | Live Dashboard
dbt, SQL, Snowflake, Power BI, Airflow, Airbyte, Docker, PHP

- Built an end-to-end analytics engineering platform that moves dealership data from MySQL into Snowflake via Airbyte, then models it through a 36-model dbt architecture (15 staging, 7 intermediate, 14 mart: 5 dimensions, 3 facts, 6 aggregates) covering sales, inventory, parts, and seller-risk reporting.
- Reached 95% dbt test coverage, pairing uniqueness, not-null, and relationship tests with documentation and lineage graphs so a broken key gets caught before it reaches a dashboard.
- Designed incremental-refresh logic in dbt so daily builds process only new and changed records instead of the full dataset.
- Orchestrated the daily pipeline with Airflow, from Airbyte sync through dbt build to Power BI refresh, with Microsoft Teams alerts if a step fails.

Education & Certifications

Master of Science in Analytics — Georgia Institute of Technology Expected July 2027

- CS 6400: Database Systems Concepts and Design (Relational Modeling, SQL, Normalization, Indexing)
- CSE 6242: Data and Visual Analytics (Spark, Databricks, Docker, Tableau, Cloud Computing)

AWS Certified Data Engineer – Associate (DEA-C01) — Amazon Web Services Feb 2026
dbt Analytics Engineering Certification — dbt Labs Expected 2026
Microsoft Certified: Power BI Data Analyst Associate (PL-300) — Microsoft Jul 2026
Bachelor of Arts in Psychology — California State University, Fullerton May 2022
